DETAILED ACTION

Drawings

1. New formal drawings are required in this application because all figures are informal and unclear. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 1 and 3-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Weidman (U.S. Patent No. 5,295,211).

Art Unit: 2882

Weidman discloses an optical fiber amplification coupler used in transmission of telecommunication systems (col. 1, lines 64-67) with fibers positioned at the input and output (col. 10, lines 3-5), a doped fiber core and cladding area surrounding the core (col. 1, lines 57-60), a mode field diameter of $10.5\ \mu\text{m}$ (col. 1, lines 64-67) at a cut-off wavelength of 1550nm (col. 1, lines 64-67).

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Brown (U.S. Patent No. 6,317,549).

Brown discloses an optical fiber amplification coupler with a doped fiber core and cladding area surrounding the core (abstract), a mode field diameter of $8.4\ \mu\text{m}$ (col. 5, lines 60-66) at a cut-off wavelength less than that of 1450nm (col. 5, lines 60-66).
